2020年5月24日

聚烯烃：关注PP9-1正套

空头主要逻辑：5-6月供应转向宽松（PE主要体现在进口端，PP体现在进口端及标准品开工的提升）；PP现货估值偏高（各工艺利润化工品中最高）；PP非标走弱；需求淡季

多头主要逻辑：现实低库存（PP库存结构更优）；中下游补库潜力大（刚性需求不差、固体化工投机性需求大）；成本支撑转强（原油、乙烯、丙烯等持续反弹）；PP贴水结构，PE利润压缩空间已不大；宏观预期转好

我们的观点：上周基差走弱逐步兑现空头逻辑，进口压力开始实质性显现，港口库存拐头向上，但现货冲击力度仍有待观察。受成本支撑及远期预期转好影响，空头逻辑兑现更多体现在基差走弱，9月合约短期承压但支撑较强。

策略推荐：1) PP9-1正套（主要逻辑PP下半年的新增产能基本兑现在2101合约且2101盘面目前仍有较大利润，2009目前有400左右基差，9月之前2009合约势必期现回归，而2101在投产预期下大概率维持Back结构）。入场建议160以下，100以下止损，目标400以上。

2) LL9-1反套（主要逻辑PE目前现货冲击大于PP，L2009开始升水现货，L2101盘面接近成本线）。

3) 多PP空L。

【PE、PP国内供应】5-6月国内检修支撑：PP拉丝结构性偏紧现状已缓解，边际供给压力加大

【PE、PP进口】——进口窗口收窄，7月以后进口或出现收缩

【PE、PP库存】——石化库存去化至往年同期水平；进口到港逐步兑现，港口库存出现拐点

【PE、PP估值】——利润走扩，聚烯烃整体估值水平偏高

【PE、PP非标】——粒粉价差平水，PP粒料支撑较强；共聚走弱明显

单体——乙烯走强修复低估值；丙烯对PP支撑较强

【PVC供应】受检修影响，4-5月开工维持低位

【PVC产业链库存】中上游库存去化，下游原料库存偏高，警惕负反馈

【PVC估值】估值快速修复
